Refillable ECO airless jar for clean beauty, non-toxic skincare solution

The ECO Airless evolves from bottle to jar. It is a stylish change for the clean beauty and non-toxic skincare sector, and all components are separable for easier refilling or post-consumer recycling.

ECO Airless has been around for years, and it's becoming a trend for beauty world followers. Inheriting all the ECO Airless benefits, the new refillable ECO Airless Jar - **RePod** offers a better and efficient way for daily usage, refills, and recycling.

The Jar itself is SRP's patented ECO Airless technology that benefits from the two-wall structure. A thin inner film as a 100% vacuum-sealed pouch protects the delicate product and active ingredient. A sturdy impact-resistant wall can be 75% post-consumer recycled resin or recycled ocean waste plastic.
