molded-in-color with
metallic effects**

For packaging design, while seeking excitement to impress consumers visually, sustainability and price remain the key to project approval.

Metalsheen, a metallic pigment for plastic molding colorant, offers a cost-effective ECO option. It stands out and turns plastic components shiny without metallization.

Combined with custom coloring, it provides a metallic luster to PET, PP, and ABS components to ensure new items fit into existing packaging collections.

Metalsheen alone gives a strong visual impact, while in conjunction with silkscreen printing, hot stamping, and labeling, it enables unlimited customization for packaging design.

The benefits of Metalsheen

Metalsheen has the luster inside out a component with a scratch-resistant quality that doesn't wear off for daily usage.

It also means a safer solution as users need not worry about the come-off metalized flakes polluting products.

Without the secondary process (metalization), Metalsheen projects benefit from lower production costs and shorter lead time under eco-friendly and clean production.

The benefits of Metalsheen

- ★ Metallic luster inside-out
- ★ Scratch resistant
- ★ Product safety
- ★ Lower production cost
- ★ Shorter lead time
- ★ ECO-friendly, clean production
- ★ For PET, PP, ABS components
