

No extra work for a
textural, frosted,
matte PET bottle.

WWW.SRPACKAGING.COM

A combination of different decorations helps designers achieve brilliant brand concepts. Hence, the more possibilities, the better, and staying within lead time and budget matters.

A matte PET bottle without extra work.

The method is to apply matte masterbatch to produce a consistent, high-quality matte finish on blow molding PET components.

Contrary to add-on decorations such as matte spray coating or soft-touch spray, using a matte masterbatch to achieve a frosted surface does not require additional process. It helps project managers keep tight lead time on track, and use the budget of just any PET bottle to get a level-up, premium look.

Aesthetic, Compatibility, Recyclability

Looking good is the key.

Product compatibility is necessary.

Recyclability allows brands to grow sustainably with consumers.

With these three benefits ticked, the frosted, matte PET bottles ensure a successful debut for skin care, beauty, toiletry, and cosmetic products to eco-conscious Gen Z consumers.

Recycled PET

The frosted, matte-touch PET bottles without extra processing are also available in the PCR option (post-consumer recycled plastics), mechanically or chemically recycled.
