usage.

Airless Shuttles are the multi-cartridge airless concept by SR Packaging, designed and manufactured in Taiwan. 2 in one, 3 in one, or 4 in one, each serves for the rise of personalized beauty trends of customizable possibilities. Each PCR airless cartridge uses 70% plastic less than the conventional piston-type airless bottles.

Fill

Contract manufacturers
fill the cartridges over
the pump engine.

Use

Consumers use the product via
the matching airless pumps &
sprayers. As the pressure sets
in, this inner pouch contracts
and separates evenly from the
exterior bottle wall.

Recycle

It leaves nearly nothing
behind after usage.
Consumers discard the
emptied cartridges into
recycle bin.
