TPE-tip lip balm tubes made in USA

*Positive feedback from beauty companies highlights an incredible change in using American-made tubes, which shortens lead time to 40 days and is tariff-free, with various styles, including **Jelly Lip Tubes**.*

.....

Lip treatments—from balms and glosses to lacquers—are staples in today's beauty market and a vital part of any brand's lineup.

SR Packaging North American Inc. meets this demand by providing compatible packaging solutions with the key advantages of shorter lead times and no tariffs. This allows beauty companies to bring their products to market faster and more cost-effectively, giving them a significant competitive advantage.

Better User Experience.

Feels like a light kiss on the lips.

The chemically compatible TPE tip for the tube applicator produces a unique sensation on the delicate lips, ensuring users enjoy the process during usage.

Post-consumer recycled.

Minimize environmental impact.

Opting for PCR plastic for tube sleeve production keeps plastic waste out of landfills and oceans, contributing to a cleaner environment.

Using PCR requires less energy and fossil fuel consumption compared to virgin plastic, resulting in lower greenhouse gas emissions.

Customization

TPE-tip in vivid and bright colors.

Apart from having a clear TPE tip, brands can request tailored, vivid colors to match the tube sleeve and add silkscreen and hot stamping to the tube decoration to achieve the desired design.
